Quallenkino for Jellyfin – UX Scenario

App ID: de.drdothouse.quallenkino · Platform: LG webOS TV · Developer: DrdotHouse2106
Source code (GPL v2): https://github.com/DrdotHouse2106/Quallenkino-webOS

1. What the app does

Quallenkino is a TV client for the open-source media server **Jellyfin**. The user connects the app to their own Jellyfin server (or one run by family/friends) and watches their own movies, shows and live TV from it. The app has no developer backend, no user account with the developer, **no in-app purchases and no ads**. All content comes from the Jellyfin server the user enters.

The user interface is in **German**. This document gives the German labels together with an English translation (*German label* = English meaning).

2. Test account

Server address	**https://demo.jellyfin.org/stable** (public demo server of the Jellyfin project)
User	**demo**
Password	none – leave empty

> Rows marked "(*)" below – personal recommendations, "Worlds", "Top 10" and the live TV guide – need the optional server plugin "Local Recommendations" or TV tuners on the server. The public demo server has neither, so these rows do not appear there. Screenshots of these features were taken on the developer's own server; artwork, titles and channel names are blurred for copyright reasons. All other features can be tested with the demo server.

3. Controls

The app is fully usable with the arrow keys, OK and BACK of the standard remote. The Magic Remote pointer also works (hover focuses, click opens).

Key	Function
Arrow keys	Move focus (focused element has a white frame)
OK	Open / select
BACK	Go back one page; on the home screen: dialog *„Quallenkino beenden?“* = "Exit Quallenkino?" (*Abbrechen* = Cancel, *Beenden* = Exit)
Play/Pause, ◀◀ ▶▶	Player controls

4. Scenario A – First start and sign-in

1. Launch the app. The splash screen appears, then *„Mit deinem Server verbinden“* = "Connect to your server".
2. Press OK on the address field, enter **demo.jellyfin.org/stable** with the on-screen keyboard and select *„Verbinden“* = "Connect". The app tries https/http and standard ports by itself.

3. The page *„Wer schaut gerade?“* = “Who’s watching?” shows the profiles of the server. Select the profile **demo**. (If no tile appears: *„Anderes Profil“* = “Other profile”, user name **demo**, empty password, *„Anmelden“* = “Sign in”.)
4. The home screen opens. The sign-in is remembered; after restarting the app the profile page shows the profile again.

5. Scenario B – Home screen, details, playback

1. Home screen: large info area at the top (billboard) with *Abspielen* = Play, *Mehr Infos* = More info, *Trailer*; rows below such as *Weiterschauen* = Continue watching, *Als Nächstes* = Next up, *Kürzlich hinzugefügt* = Recently added.
2. Press DOWN into a row and RIGHT/LEFT through the titles. The info area at the top updates to the focused title.
3. Press OK on a movie (e.g. “The Jungle Book” or “Caminandes”). The detail page opens with description, cast (*Darsteller und Crew*), similar titles and the buttons *Abspielen* (Play), *Trailer*, *Gefällt mir* (Thumbs up), *Nichts für mich* (Thumbs down).
4. Select *Abspielen*. The video plays. OK shows the player controls; there the button for audio and subtitles opens one window with both.
5. Press BACK to stop. The title now appears under *Weiterschauen* (Continue watching) with a progress bar; *Fortsetzen* = Resume, *Von vorne* = From start.
6. For a series episode: at the end the countdown *„Nächste Folge“* = “Next episode” appears; with an intro marker on the server the button *„Intro überspringen“* = “Skip intro” appears.

6. Scenario C – Search, settings, screensaver, exit

1. Press LEFT until the menu on the left opens: *Profil* (Profile), *Suche* (Search), *Startseite* (Home), *Live-TV*, *Entdecken* (Discover), *Einstellungen* (Settings).
2. *Suche*: enter a few letters (e.g. “caminandes”) with the on-screen keyboard; matching movies, shows and people are listed.
3. *Einstellungen*: subtitles and audio at start, trailer preview on/off, screensaver delay (*Bildschirmschoner nach* 2/5/10 min/off), teaser trailers in the screensaver and their volume (*Stumm/Leise/Normal* = mute/quiet/normal), and under *Konto* (Account): *Profil wechseln* (Switch profile), *Abmelden* (Sign out), *Server wechseln* (Change server). *Über* = About (version, TMDB notice).
4. Sign out: Settings → Account → RIGHT → *Abmelden*. The app returns to “Who’s watching?” without the profile.
5. Screensaver: leave the app untouched for 2 minutes (default). A full-screen screensaver shows backdrops of the user’s titles with clock and the hint *„OK: Details · andere Taste: zurück“* = “OK: details · any other key: back”. While it is enabled the app keeps the TV’s own screensaver from covering it; if it is set to off, the TV screensaver works as usual.
6. On the home screen press BACK: the exit dialog appears with focus on *Abbrechen* (Cancel); *Beenden* (Exit) closes the app.

7. Scenario D – Features that need the server plugin (*)

- **Recommendations with reason (*)**: rows *Empfohlene Filme/Serien für dich* (Recommended movies/shows for you); the info area shows e.g. *„Weil du … geschaut hast“* = “Because you watched …”.

- **On TV today for you (*)** and **Live TV guide (*)**: *Heute im TV für dich*; menu *Live-TV* → program guide with filters, favourite channels, and director/cast of the focused programme.
- **Worlds (*)**: row *Welten* – film series/studios with logo; OK opens the world page.
- **Top 10 (*)**: *Top 10 bei euch* – most watched titles of all users on the server.
- **Discover & request**: menu *Entdecken* – only if the server has Jellyseerr; movie posters for titles not yet on the server are loaded from TMDB.
- **Person pages**: OK on a cast member → all titles of that person in the library, with *Verfügbar* (Available) / *Angefragt* (Requested).

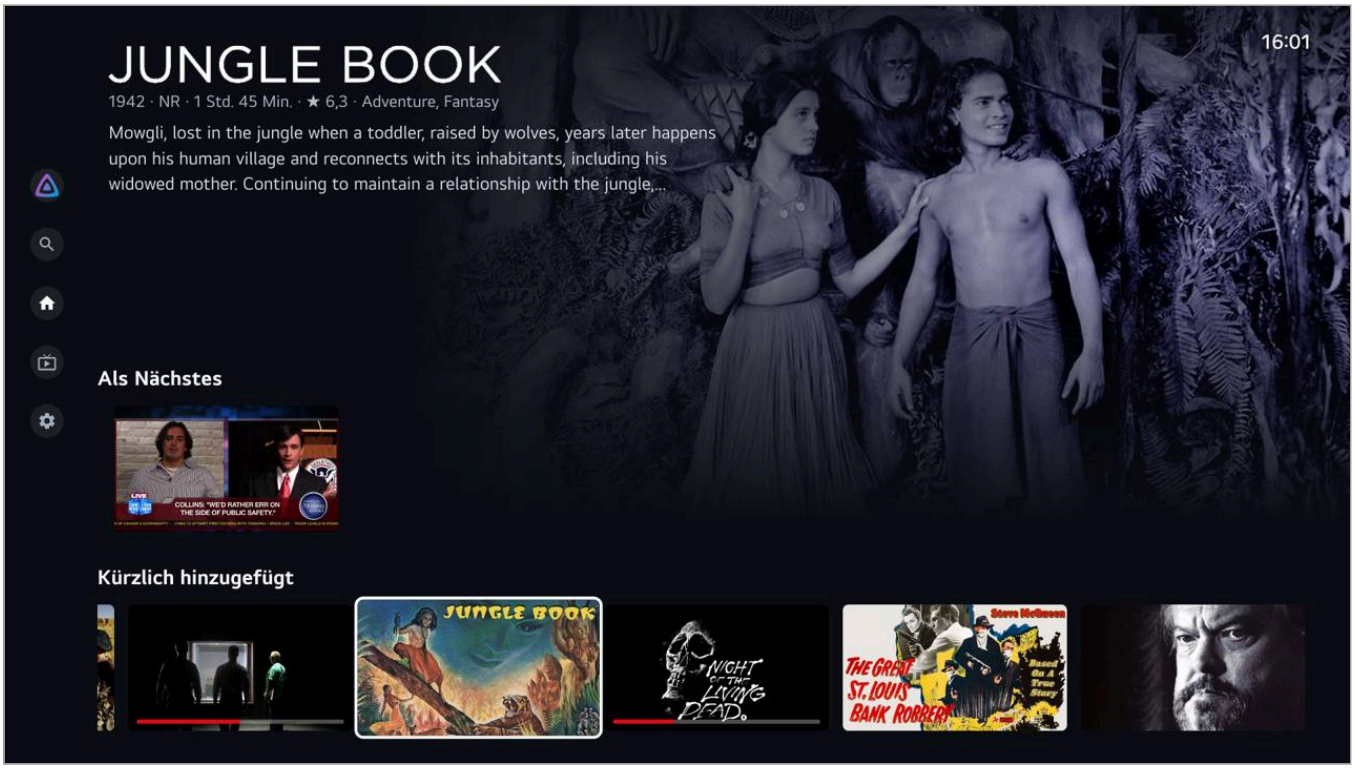

8. Notes

- YouTube trailers use the official YouTube player, embedded from https://drdothouse2106.github.io/Quallenkino-webOS/yt.html (the TV runs the app under file://, where YouTube does not embed directly). The player is neither covered nor cropped.
- No in-app purchases, no ads, no billing, no voucher codes, no geo blocking.
- Privacy policy: https://github.com/DrdotHouse2106/Quallenkino-webOS/blob/main/PRIVACY.en.md

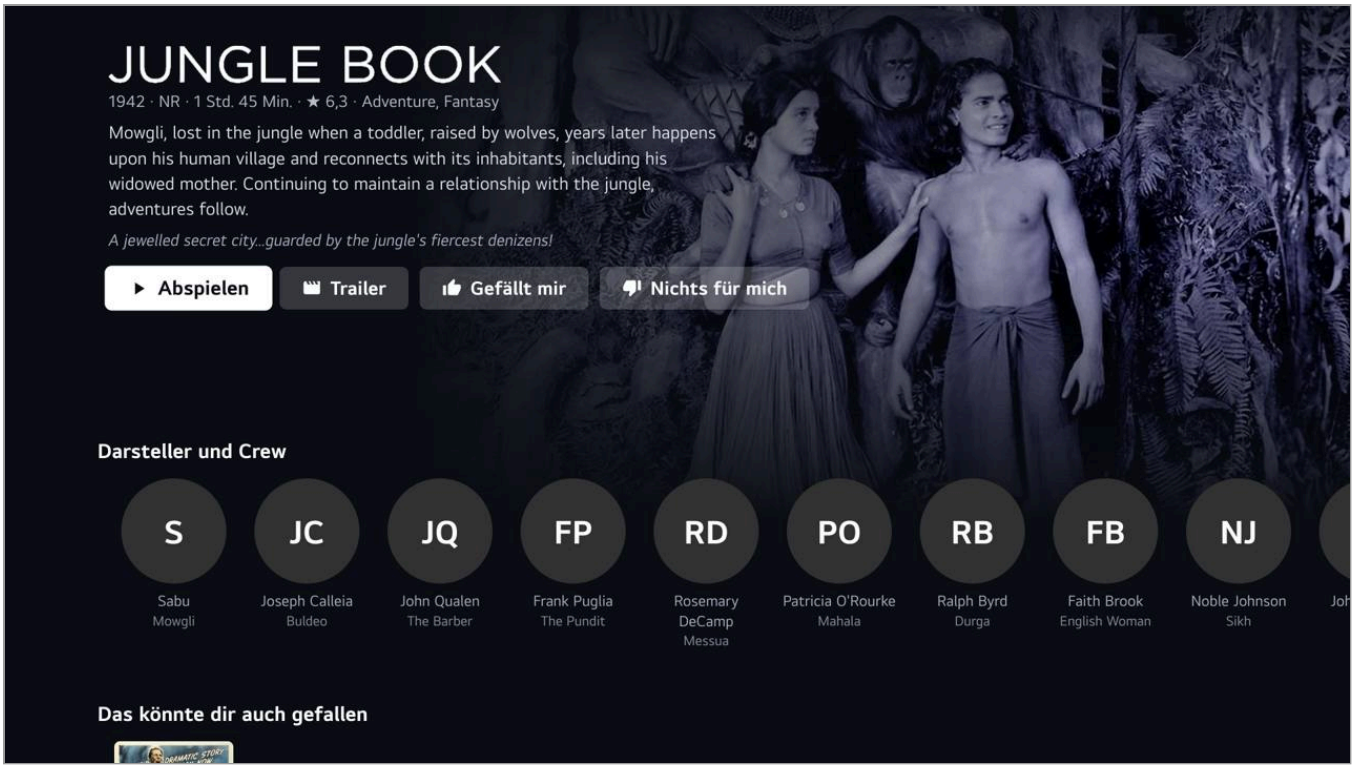

9. Screenshots

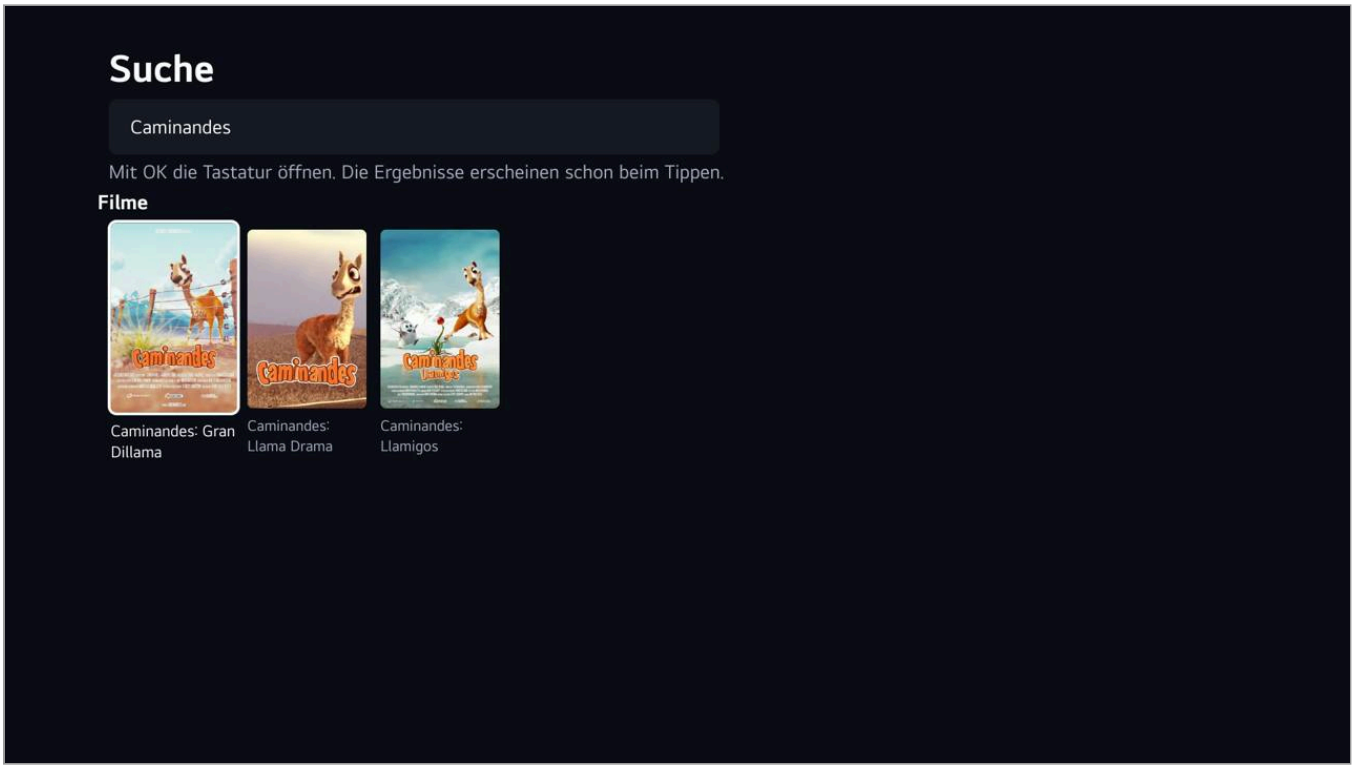

1 – Home screen with info area and trailer (demo server)

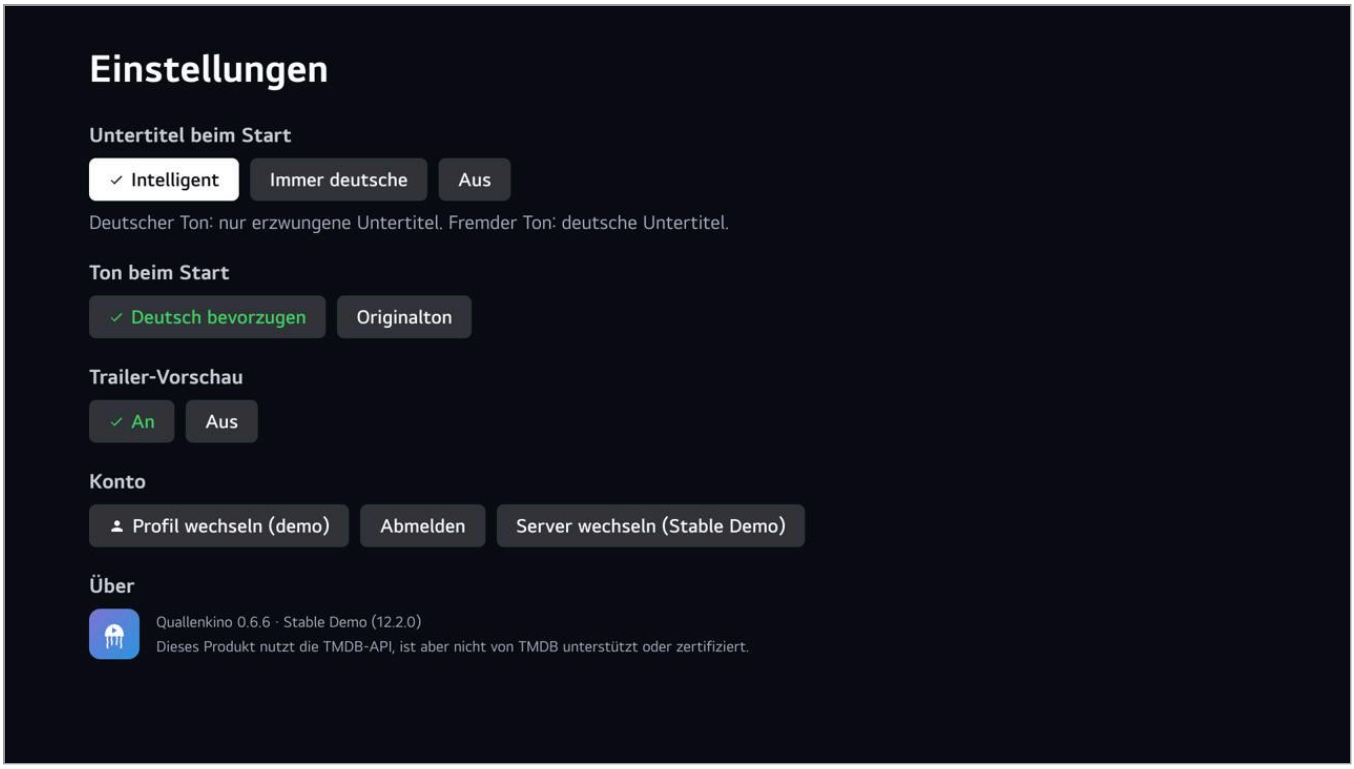

2 – Rows on the home screen (demo server)

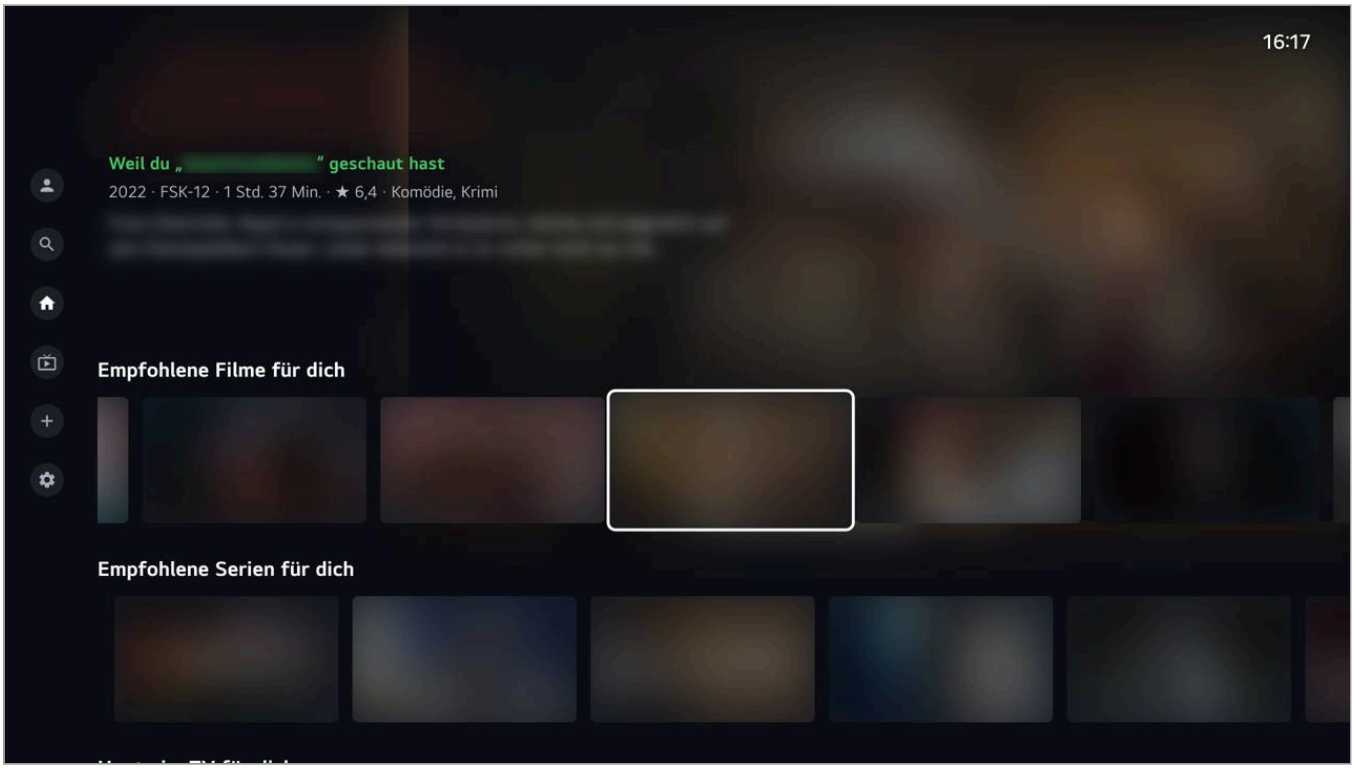

3 – Detail page (demo server)

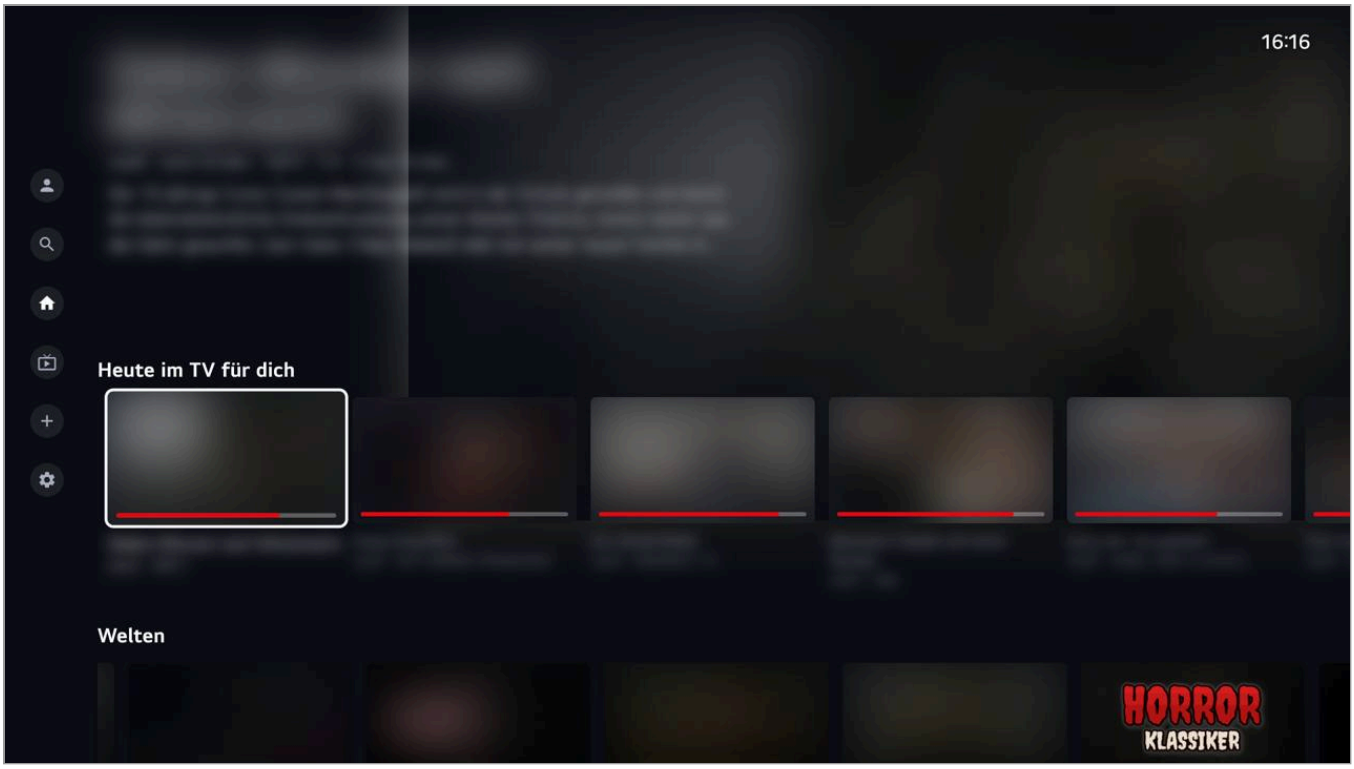

4 – Search (demo server)

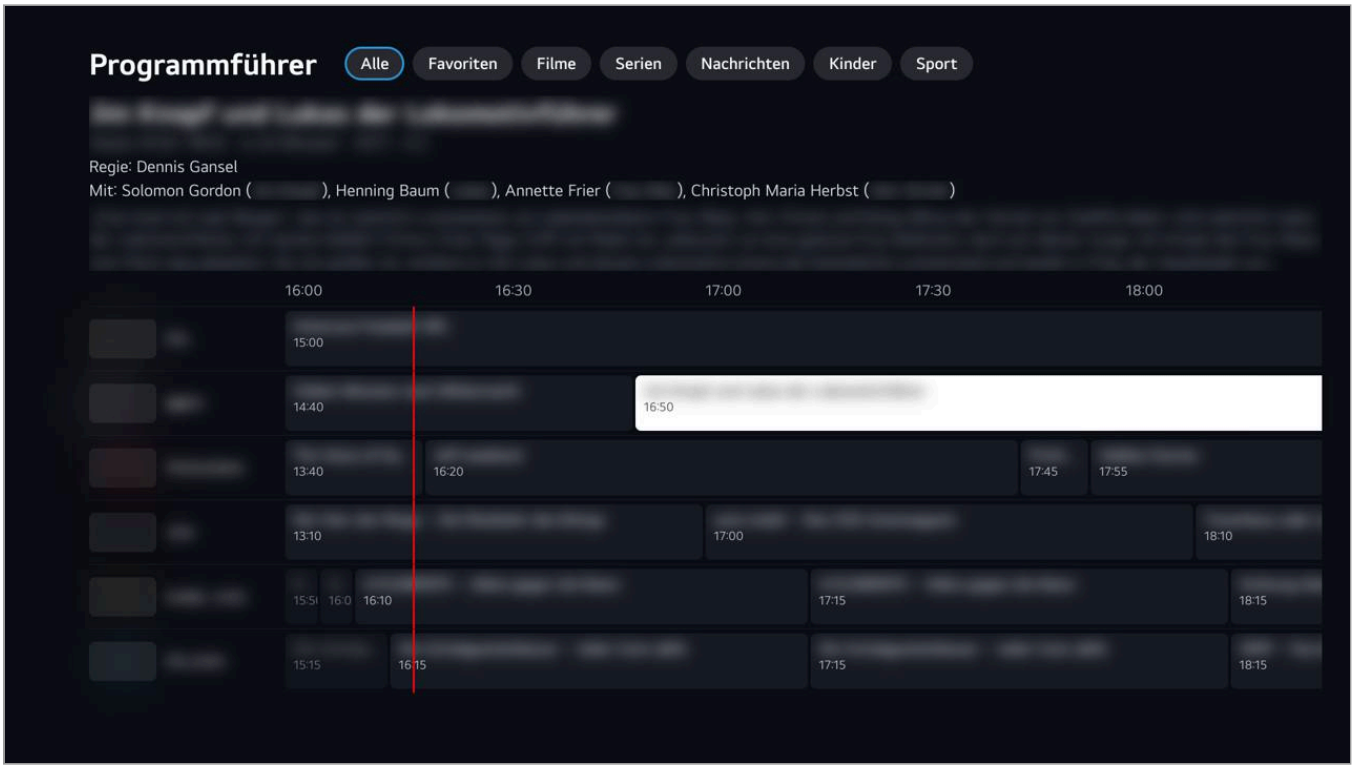

5 – Settings (demo server)

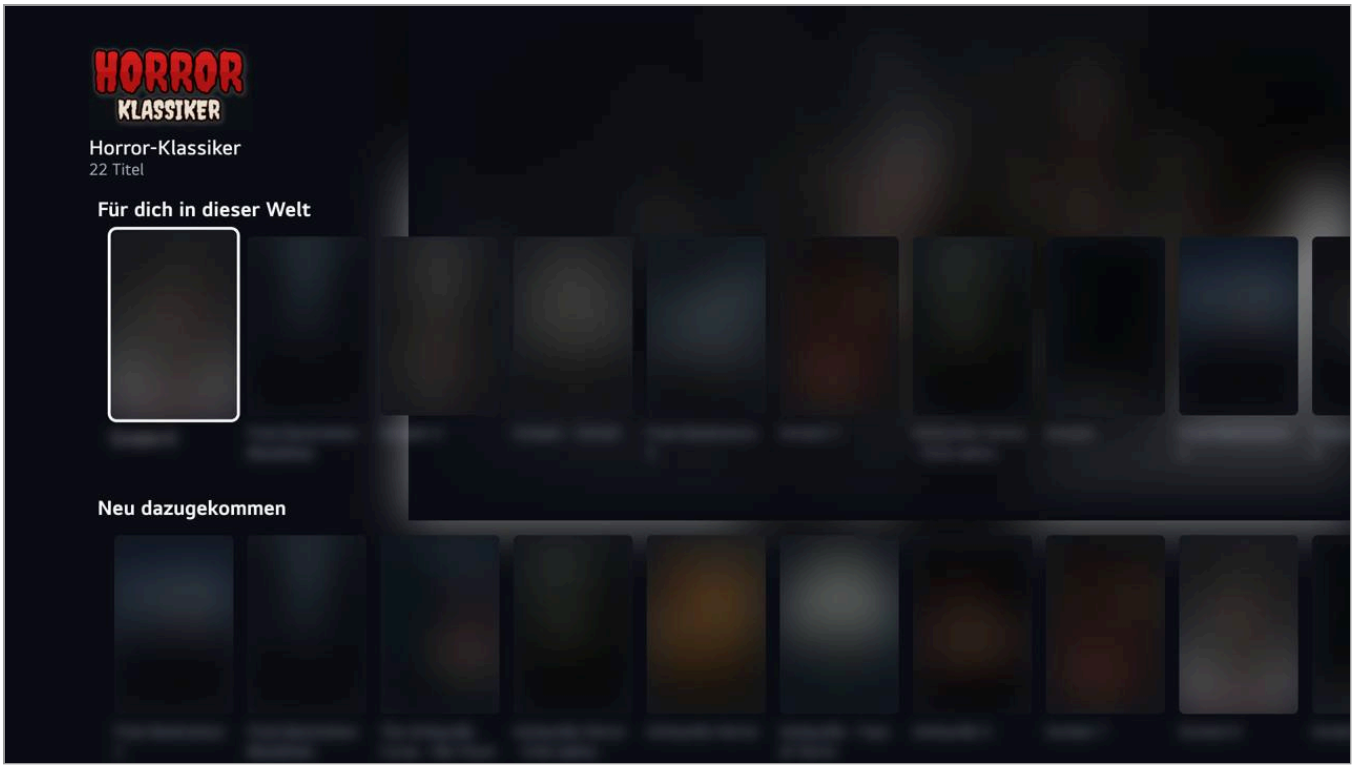

6 – Recommendation with reason (*) – own server, blurred

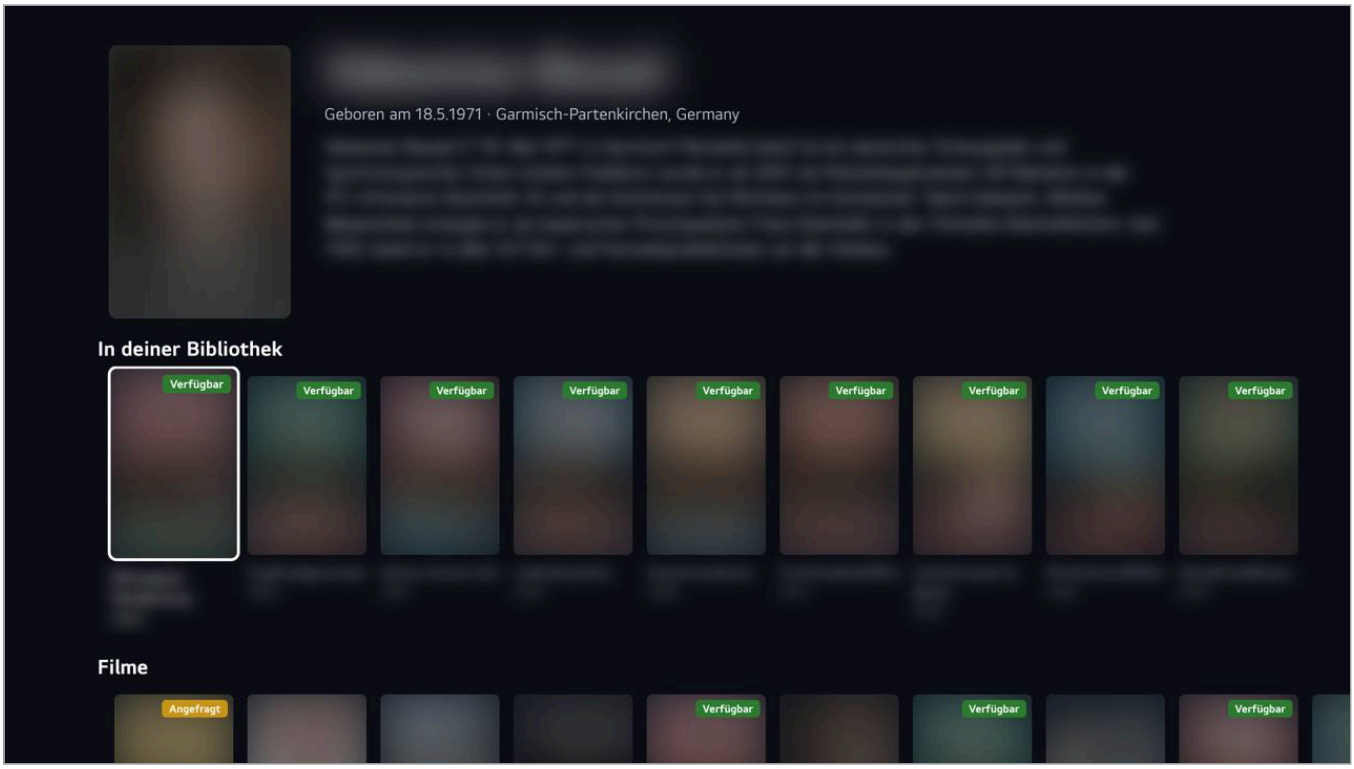

7 – On TV today for you (*) – own server, blurred

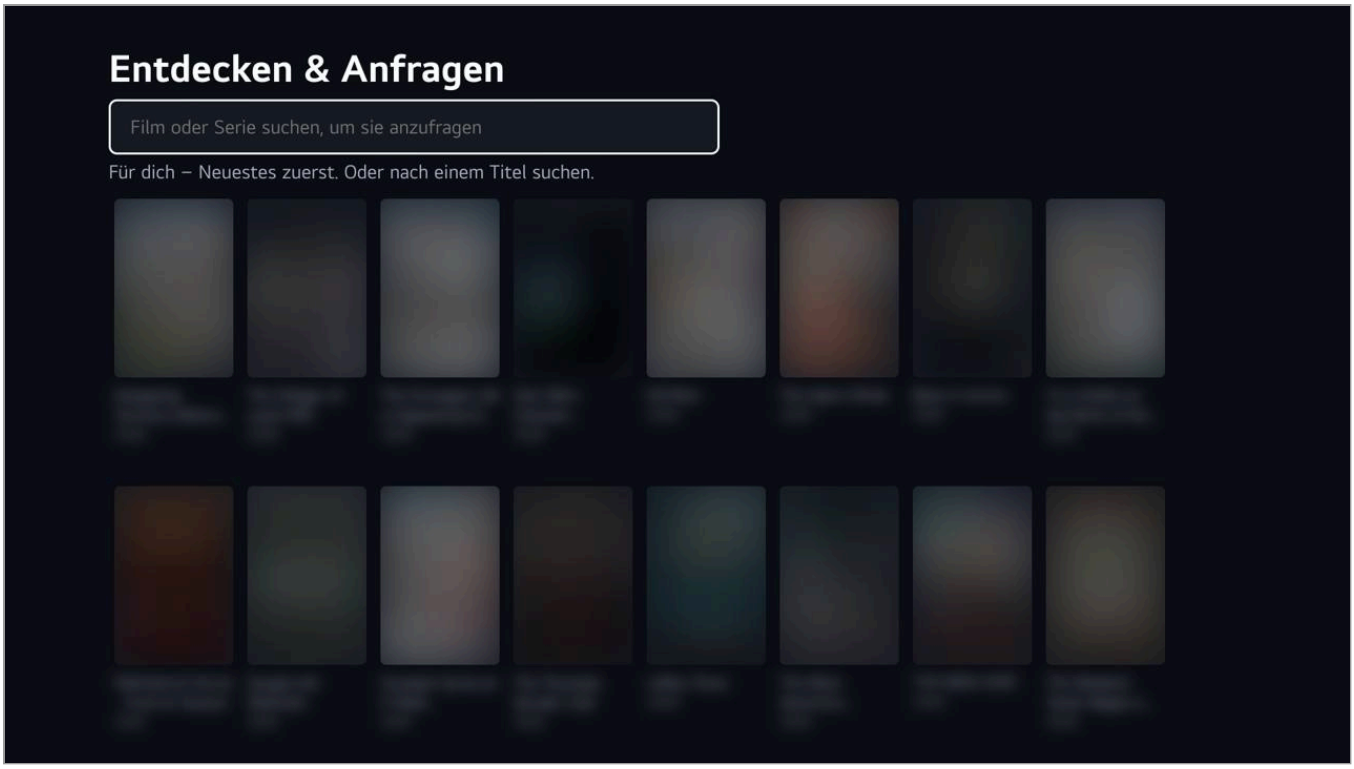

8 – Live TV guide with director and cast (*) – own server, blurred

9 – World page (*) – own server, blurred

10 – Person page with “Available”/“Requested” – own server, blurred

11 – Discover & request (Jellyseerr) – own server, blurred
